

The image shows a detailed view of an orange PCB. It features a complex network of white conductive traces. Numerous circular pads, some with central vias, are distributed across the board. Various electronic components are visible, including small surface-mount components and larger circular components. White text labels are printed on the board, identifying specific components and sections. The labels include 'R384', 'R446', 'R161', 'R439', 'R410', 'R185', 'R146', 'C308', 'C125', and 'Uke13Xtra'. The text 'JDBC' is overlaid in the center of the image.

JDBC

Uke13Xtra

# Repetisjon: Collection

# Collection – java docs

java.util

## **Interface Collection<E>**

### **Type Parameters:**

E - the type of elements in this collection

```
public interface Collection<E>  
    extends Iterable<E>
```

The root interface in the *collection hierarchy*. A collection represents a group of objects, known as its *elements*. Some collections allow duplicate elements and others do not. Some are ordered and others unordered.

# collection

The Collection API (part of it)

# Collection –Quiz: Set , map or list

Duplicates OK.

Duplicate values OK, but NO duplicate keys.

NO duplicates.

# JDBC

- Drive manager
- Connection
- DataSource
- Properties
- SQL statements
- Prepared statements

- **try-with-resources**

Unntak

The `try-with-resources` statement is a `try` statement that declares one or more resources. A *resource* is an object that must be closed after the program is finished with it. The `try-with-resources` statement ensures that each resource is closed at the end of the statement. Any object that implements `java.lang.AutoCloseable`, which includes all objects which implement `java.io.Closeable`, can be used as a resource.
